

Provincial Conservatives

PCPC PLATFORM

- **ALTERNATIVE TO CARBON TAX**

The Alberta PCPC party believes that we need to look at an even stronger economical model to allow hydrocarbon

- producers to directly invest a fixed amount per unit produced into renewable energy systems (e.g., wind farms, Solar Cities, HHO).

- **HEALTHCARE**

PCPC party advocates a healthy prevention oriented provincial health care system.

- **ENVIRONMENT**

When it comes to climate change we know that economic development and supporting alternative solutions are complimentary.

VISION FOR THE FUTURE

The PCPC party is starting where the Peter Lougheed Conservatives left off and respecting over 40 years of a politically central party. We will lead a new Alberta with our hopes and not our fears and with shared values as the strongest economic engine in Canada. Capitalism and open markets are the greatest strengths of our present economy. They are the largest generators of wealth in our province and give us the highest standard of living in the world. But globalization and increased automation have weakened the position of workers in the world and their ability to secure a decent wage. We know that economies don't prosper as fast when just a few prosper at the expense of the middle class.

The Alberta Boom and Bust is done. Its time that we stop this cycle forever. A boom and bust society is very costly economically and socially to rebuild. Progressive Canadian Provincial Conservatives will push for the necessary changes to provide the vision for a brighter future for all Albertans. The development of solar, wind, and in particular HHO (hydro generation) is less expensive than oil and gas with a lower carbon footprint. Our air will be cleaner than its ever been before for our children and our children's children.
